PROFESSIONAL SUMMARY

Backend-focused Full-Stack Developer with 2 years of production experience building secure, scalable, fault-tolerant **Spring Boot** **microservices** and **RESTful APIs** on an enterprise HRMS platform serving **10,000+ active users**, along with personal-project experience building **React.js** frontends for full-stack applications. Skilled in event-driven architecture (**Kafka**), authentication/authorization design (**Spring Security**, **JWT**, **RBAC**), and container-based delivery (**Docker**, CI/CD) within Agile teams. Uses AI coding tools (**GitHub Copilot**, **Claude**) to accelerate development while critically reviewing generated code for correctness and security.

TECHNICAL SKILLS

Languages	: Java, JavaScript
Backend	: Spring Boot, Spring Security, Spring Data, Hibernate/JPA, Apache Kafka, Eureka Service Discovery, API Gateway, REST APIs, JWT, OAuth2
Databases	: PostgreSQL, MongoDB, MySQL, Redis
Architecture	: Microservices, Event-Driven Architecture, Clean Architecture, Layered Design, Repository Pattern
Security	: JWT, BCrypt, OAuth2, Spring Security, Role-Based Access Control (RBAC)
Tools & DevOps	: GitHub, Bitbucket, Docker, Kubernetes (personal projects), CI/CD, Firebase, SMTP
AI Tools	: GitHub Copilot, Claude (AI-assisted development & code review)
Testing	: JUnit, Mockito, Unit Testing, Integration Testing
Frontend	: React.js, Redux Toolkit, Material UI, Tailwind CSS, React Router DOM, HTML5, CSS3

PROFESSIONAL EXPERIENCE

Associate Software Engineer

Sept 2024 – Present

Mewurk Technology

Bengaluru, India

- Solely designed, built, and shipped **User Service** and **Expense Service** as independent Spring Boot microservices within a larger enterprise HRMS platform, powering onboarding, attendance, leave management, payroll, and expense tracking for **10,000+ active users** in production.
- Implemented **Spring Security**, **JWT authentication**, and **Role-Based Access Control (RBAC)** across Admin, HR, and Employee modules to secure sensitive organizational and personal data across the platform.
- Designed **secure, fault-tolerant REST APIs** backed by Hibernate/JPA and PostgreSQL/MySQL, enforcing a consistent **ApiResponse<T>** envelope contract across services, optimizing queries, and reducing frontend-backend integration bugs.
- Architected an **async event pipeline via Apache Kafka** to decouple services, configured **Netflix Eureka** and **API Gateway** for dynamic registration, centralized routing, and load balancing; introduced **Redis** caching to improve response times.
- Used **AI coding assistants (GitHub Copilot, Claude)** throughout the development lifecycle to accelerate implementation and testing, while reviewing all AI-generated code for correctness, security, and adherence to the codebase before merging.

Stack: Java, Spring Boot, Spring Security, Kafka, Eureka, API Gateway, Redis, Hibernate/JPA, PostgreSQL, MySQL, Docker, Bitbucket, JIRA

PROJECTS

Enterprise Spring Security Template | *Production-Style Auth & Authorization Microservice* | [GitHub](#)

Java · Spring Boot · Spring Security 6 · JWT · RBAC · Hibernate/JPA · MySQL · Redis · Kafka · Docker · Swagger

- Architected a reusable, enterprise-grade authentication and authorization system using **Spring Security 6**, **JWT**, **RBAC**, and **stateless session management**, simulating real-world security implementations for HRMS, fintech, and SaaS platforms.
- Built complete login/registration flows with **BCrypt-encrypted passwords**, secure token generation, and refresh-token handling; layered the codebase into Controller/Service/Repository/DTO with centralized exception handling.
- Configured **Spring Data JPA and MySQL** for user/role management and audit fields; documented APIs with **Swagger/OpenAPI**, containerized the service with **Docker**, and explored **Redis** caching and **Kafka** event patterns for scalable microservices integration.

AI-Powered Fitness Tracker | *Full-Stack Microservices* | [GitHub](#)

Java · Spring Boot · Kafka · Keycloak · OAuth2 · React.js · Redux · MongoDB · PostgreSQL · Gemini API

- Architected independently deployable User Service (PostgreSQL), Activity Service (MongoDB), and AI Service routed through Spring Cloud Gateway; used **OpenFeign** for sync calls and **Kafka** for async event streaming, with **Netflix Eureka** for service discovery.
- Integrated **Google Gemini API** to generate personalized fitness recommendations from activity data; secured the platform end-to-end with **Keycloak + OAuth2** and built the frontend with React.js + Redux Toolkit.

ACHIEVEMENT

Engineering Excellence Award | Mewurk Technology — January 2026

Awarded for independently delivering two production microservices serving 10,000+ users within the first year; recognized for technical ownership and code quality.

3-Star Coder | CodeChef

Achieved a 3-star rating on CodeChef, reflecting strong problem-solving and competitive programming skills.

EDUCATION

Muzaffarpur Institute of Technology

B.Tech in Information Technology

Bihar, India

Nov 2020 – Aug 2024
