PROFESSIONAL SUMMARY

Full Stack Developer with 2 years of hands-on experience building both front-end and back-end for production systems – **React.js/Redux** on the client side and **Java, Spring Boot, microservices** on the server side – for an enterprise HRMS platform serving 10,000+ users. Proficient with **Hibernate/JPA** for data persistence, designing and consuming **RESTful APIs**, and containerizing services with **Docker**. Cloud-platform experience on **AWS (EC2, S3)** (no direct GCP project experience yet, but comfortable picking up GCP given the overlap in core cloud/container concepts). Writes clean, tested code (JUnit, Mockito) within an **Agile/Scrum** team, participates actively in code reviews and architectural discussions, and uses **AI tools (GitHub Copilot, Claude)** to boost productivity while applying judgment to keep AI-generated output correct and secure. Recipient of the **Engineering Excellence Award, Jan 2026**.

TECHNICAL SKILLS

Languages	: Java, JavaScript (ES6/ES7)
DSA	: Data Structures & Algorithms – 400+ problems (GeeksforGeeks), 200+ problems (LeetCode)
Backend	: Spring Boot, Spring Security, Spring Data, Hibernate/JPA, Apache Kafka, Eureka Service Discovery, API Gateway, REST APIs, JWT, OAuth2
Frontend	: React.js, Redux Toolkit, JSX, DOM Manipulation, JSON, Material UI, Tailwind CSS, React Router DOM, HTML5/XHTML, CSS3, Responsive Web Design
Cloud	: AWS (EC2, S3), Docker, Kubernetes (personal projects), Firebase
Databases	: PostgreSQL, MongoDB, MySQL, Redis
Architecture	: Microservices, Distributed Systems at Scale, Event-Driven Architecture, Fault-Tolerant Design, Clean Architecture, Layered Design, Repository Pattern
Security	: JWT, BCrypt, OAuth2, Spring Security, Role-Based Access Control (RBAC)
DevOps & QA	: GitHub, Bitbucket, JIRA (bug tracking), Confluence, CI/CD, Agile/Scrum, JUnit, Mockito, Jest & RTL
AI Tools	: GitHub Copilot, Claude (AI-assisted development & code review)

PROFESSIONAL EXPERIENCE

Associate Software Engineer

Sept 2024 – Present

Mewurk Technology

Bengaluru, India

- Built **end-to-end features** across the stack – **React.js/Redux Toolkit** front-end and **Java/Spring Boot** microservices (**User Service, Expense Service**) back-end – for an enterprise HRMS platform serving **10,000+ active users**.
- Developed and maintained **RESTful APIs** for seamless front-end/backend and third-party integration, using **Hibernate and JPA** for efficient data access against PostgreSQL/MySQL, and enforcing a consistent **ApiResponse<T>** contract across services.
- Implemented **Spring Security, JWT authentication, and RBAC** across Admin, HR, and Employee modules, and applied **microservices design patterns** (Kafka async messaging, Netflix Eureka service discovery, API Gateway routing) with **Redis** caching for performance.
- **Containerized services with Docker** and deployed on **AWS (EC2, S3)**; wrote clean, testable code with **unit/integration tests (JUnit, Mockito)** following best practices.
- Collaborated with product owners and cross-functional teammates within an **Agile/Scrum** environment, using **Git/Bitbucket** for version control; participated in **code reviews and architectural discussions**.
- Used **AI tools (GitHub Copilot, Claude)** to optimize workflows and boost delivery speed, applying critical judgment to review all AI-generated code and outputs for correctness, security, and responsible use.

Stack: Java, Spring Boot, Spring Security, Kafka, Eureka, API Gateway, Redis, PostgreSQL, MySQL, AWS (EC2, S3), Docker, Bitbucket, JIRA

PROJECTS

AI-Powered Fitness Tracker | *Full-Stack Microservices* | [GitHub](#)

Java · Spring Boot · Kafka · Keycloak · OAuth2 · React.js · Redux · MongoDB · PostgreSQL · Gemini API

- Designed a **distributed microservices architecture** – independently deployable User Service (PostgreSQL), Activity Service (MongoDB), and AI Service, routed through Spring Cloud Gateway – using **OpenFeign** for sync calls, **Kafka** for async event streaming, and **Netflix Eureka** for service discovery; built the frontend with **React.js** and **Redux Toolkit**.
- Integrated **Google Gemini API** to generate personalized fitness recommendations from activity data; secured the platform end-to-end with **Keycloak + OAuth2**.

Enterprise Spring Security Template | *Production-Style Auth & Authorization Microservice* | [GitHub](#)

Java · Spring Boot · Spring Security 6 · JWT · RBAC · Hibernate/JPA · MySQL · Redis · Kafka · Docker · Swagger

- Architected a reusable, enterprise-grade authentication and authorization system using **Spring Security 6, JWT, RBAC, and stateless session management**, simulating real-world security implementations for HRMS, fintech, and SaaS platforms.
- Built complete login/registration flows with **BCrypt-encrypted passwords**, secure token generation, and refresh-token handling; layered the codebase into Controller/Service/Repository/DTO with centralized exception handling.
- Configured **Spring Data JPA/MySQL** for user/role management; documented APIs with **Swagger/OpenAPI**, containerized with **Docker**, and explored **Redis/Kafka** for scalable integration.

ACHIEVEMENT

Engineering Excellence Award | Mewurk Technology, January 2026 — Awarded for independently delivering two production microservices serving 10,000+ users within the first year; recognized for technical ownership and code quality.

EDUCATION

Muzaffarpur Institute of Technology

B.Tech in Information Technology

Bihar, India

Nov 2020 – Aug 2024
